CASCADES

FIRE FALL — rose-maroon, early flowering, spreading type.

END O' THE RAINBOW — compact, lovely bright yellow.

HURRYING WATERS — small, deep yellow with wide petals.

WATERS OF THE MACKENZIE — large, spreading, clear white.

PEARLS OF NAI TSAN — large, pearl white flushed with pink.

CALIFORNIA SUNSHINE — small, light yellow.

PIRATE GOLD — golden bronze, tipped with red.

TREASURE TROVE — narrow petaled, yellow stained with bronze.

LOVE PHEASANT — late, dark rose-maroon, very strong grower.

HOAR FROST FALLS — late, compact, narrow petaled white.

EL DORADO — very late, clear yellow.

SUN OF THE FALLS — early, bronze yellow.

SMOKE OF INCENSE — early, white becoming flushed with pink.

STARLIGHT — early, bright yellow, of spreading habit.

FALLING SNOW — large, strong growing, white.

MAID OF THE MIST — early, lavender pink.

JEWELS OF THE MADONNA — white, with compact grey foliage.

FLYING FOAM — large, strong-growing, white, with wide petals.

CLOUDY SKIES — early, white changing to pink, short and compact.

And a number of other interesting varieties.

CULTURE

Preferably keep in a semi-shady location; cut back stems in February and from the new growth select two or more runners, according to age of plant, and keep the remaining shoots trimmed back. Then train and tie these leaders on bamboo stakes or wires, pointing North, and slanting up at an angle of 45°, so that sun strikes all parts equally. Disbud and pinch back the side shoots to one

or two leaf joints to develop a bushy, close-branched side growth. About end of September remove supports and let runners droop over side of pot, facing South to the sun. Plant in a mixture of good loam and leafmold, and during growing season (March-September) feed lightly with a commercial fertilizer (5-10-2). The resulting cascade of color will amply reward you.

PRICES

Trained specimens: 3 ft. to 9 ft. long, according to size, each.....**\$2.00 to \$8.50**

In gallon cans: (untrained).....each **\$.75**
In 4 inch pots: (untrained).....each **.50**

The New and Exotic "Cascading" Chrysanthemums

THE striking new "cascade" chrysanthemums are one of the most unusual floral introductions of recent years. Instead of having the stiff upright growth of the conventional chrysanthemums or the erect spreading branches of the miniature and button types, the "cascades" trail in a flowing mass of color descending four, five, or even as much as nine feet.

The flowers are of medium size—single for the most part, though some are double and some are about as large as a China aster—and are set so closely on the sprays, their edges overlap in a single broad mass of color cascading downwards to the ground. Their names—"Fire Fall," "Pearls of Nai Tsan,"

"Jewels of the Madonna," "Flying Foam," "California Sunshine," "Pirate Gold," "Falling Snow," "Love Pheasant"—suggest their exquisite loveliness. The type was discovered in Japan growing wild in one of the remote mountain areas, trailing over the rocks.

In bloom they are charming beyond description, their starry faces hanging in graceful sprays. The bright colors of them—whites, pinks, bronzes, maroons, yellows, etc., streaming down from the rim of the flowerpot make one of the loveliest floral effects imaginable. The blooms last a month or more (October-November) and offer most fascinatingly decorative ensembles for the house, patio or garden.
